

Days Plan
Author: Noelia Doman
Course: CIS 371

April 1

- Created initial HTML structure and project setup
 - Linked CSS file and imported Google Fonts
 - Planned layout structure (navigation, hero section, main content)
-

April 3

- Built global CSS system using :root variables (colors, fonts, spacing)
 - Established dark theme and typography system
 - Referenced W3Schools and CSS tools for design planning
-

April 5, 2026

- Styled base layout (body, containers, text hierarchy)
 - Implemented responsive design foundations using flexbox
 - Ensured consistent spacing and alignment
-

April 8, 2026

- Created animated background (orb elements + grain overlay)
 - Used CSS keyframes for smooth animation effects
 - Referenced CSS animation examples for implementation
-

April 10, 2026

- Designed navigation bar with sticky positioning and blur effects
- Added hover states and transitions for buttons
- Improved overall UI consistency

April 12

- Integrated Vue 3 via CDN
 - Converted static HTML into reactive Vue components
 - Implemented `v-if`, `v-show`, and `v-model`
-

April 14

- Built authentication UI (login/register system)
 - Styled forms and added validation/error messaging
 - Connected UI inputs to Vue state
-

April 16, 2026

- Set up Firebase (Auth + Firestore)
 - Implemented user authentication (sign in / register)
 - Added auth state tracking and logout functionality
-

April 18, 2026

- Integrated OpenWeatherMap API
 - Implemented geolocation to retrieve user coordinates
 - Displayed weather data dynamically in UI
-

April 20

- Created weather interpretation logic (`interpretOWM`)
 - Built activity recommendation system based on weather type
 - Displayed dynamic activity cards
-

April 22

- Styled activity cards with grid layout and animations

Days Plan Daily log

- Added hover effects, transitions, and conditional styling
 - Implemented loading and error states (spinner, messages)
-

April 24

- Integrated Google Maps API (embedded iframe search)
 - Built modal system for displaying maps
 - Connected activity selections to map queries
 - Referenced Google Maps documentation and overlay tutorials
-

April 26, 2026

- Implemented Firestore features:
 - Save plans to user collection
 - Load saved plans using `onSnapshot()`
 - Delete and edit saved plans
 - Built community feature:
 - Share activities
 - Upvote system using Firestore atomic updates
 - Added toast notifications and final UI polish
 - Tested full application (auth, APIs, database, responsiveness)
 - Pushed to github
 - Debug issue with not loading on website. Deleted web page deployment environment and redeployed it - worked!
-
